

JuST + Technology: From Access to Agency

Piter Garcia | EDU486 | Part 1 | July 14, 2026

Technology reshapes relationships among youth, community, evidence, and action. It is never just an add-on.

JuST CORE: Cultivating a justice-centered community

Belonging | trust | identity safety | language access | bodymind variability | shared purpose

1 PLAN

Planning toward a meaningful purpose that centers justice

Why might suspected microplastics appear in a parking lot and classroom?

Technology move:

Use source photos and a map to frame a community question, not a tool demo.

2 ELICIT

Eliciting student ideas about science, culture, and justice

Invite local knowledge, disability culture, home language, sensory needs, and changing energy.

Participation routes:

Voice | image | text | paper | partner
Different routes, shared rigorous purpose.

3 REVISE

Nurturing revisions in thinking and feeling with diverse perspectives

Compare indoor, outdoor, and blank samples; revise models; name uncertainty.

Access to evidence:

Shared microscope view | still image | tally. Observation is not confirmation.

4 ACT

Using science to make a difference and advocate for justice

Create art, audio, poster, or video for a real audience and actionable future.

Justice move:

Name systems, choices, and unequal burdens, not individual blame.

USING SCIENCE FOR SOCIAL TRANSFORMATION

TECHNOLOGY CAN SUPPORT

Shared microscope view | captions | paper backup
Maps and tallies make collective patterns visible.

Ask: Who can participate now?

TECHNOLOGY CAN COMPLICATE

Data can outrank lived knowledge; AI can overclaim.
Choice can fragment the shared learning purpose.

Ask: What does the tool hide?

EXPANDING WHAT COUNTS AS SCIENCE

TECHNOLOGY CAN CONSTRAIN

Surveillance, bias, cost, sensory and energy load
Wi-Fi, battery, fit, reliability, working memory.

Ask: Who bears the burden?

Invisible Invaders examples are plans for camp, not claims about completed teaching. Suspected microplastics require further identification.
